Science and Innovation for Development

*"Improving science research
inside Africa and building scientific
collaboration will deliver practical
solutions to the countries' problems.
It will do far more for Africa than
distributing food aid."*

Calestous Juma

Professor of the Practice of International
Development and director of the Science, Technology
and Globalisation project at Harvard University.

Authors: Professor Sir Gordon Conway
and Professor Jeff Waage
Published: Autumn 2009

Scientific education, knowledge and research are crucial to solving development challenges. Science as a tool for providing evidence and discovering solutions has been neglected recently by many key decision makers, *Science and Innovation for Development* aims to play a part in changing that.

Targeted at: policy makers and politicians, academia and the development community.

The scope of *Science and Innovation for Development*, co-authored by Professor Sir Gordon Conway and Professor Jeff Waage, international development experts, considers:

- Why science is important, how it works and how technologies can be sourced and partnerships formed;
- Three of the Millennium Development Goals (MDGs) – reducing hunger, improving health and protecting the environment;
- The impact of climate change and other future threats and how science can contribute to building sustainability and resilience;
- How to get advances in research and development to where they are most needed.
